

Room Profile

Large Conference Room

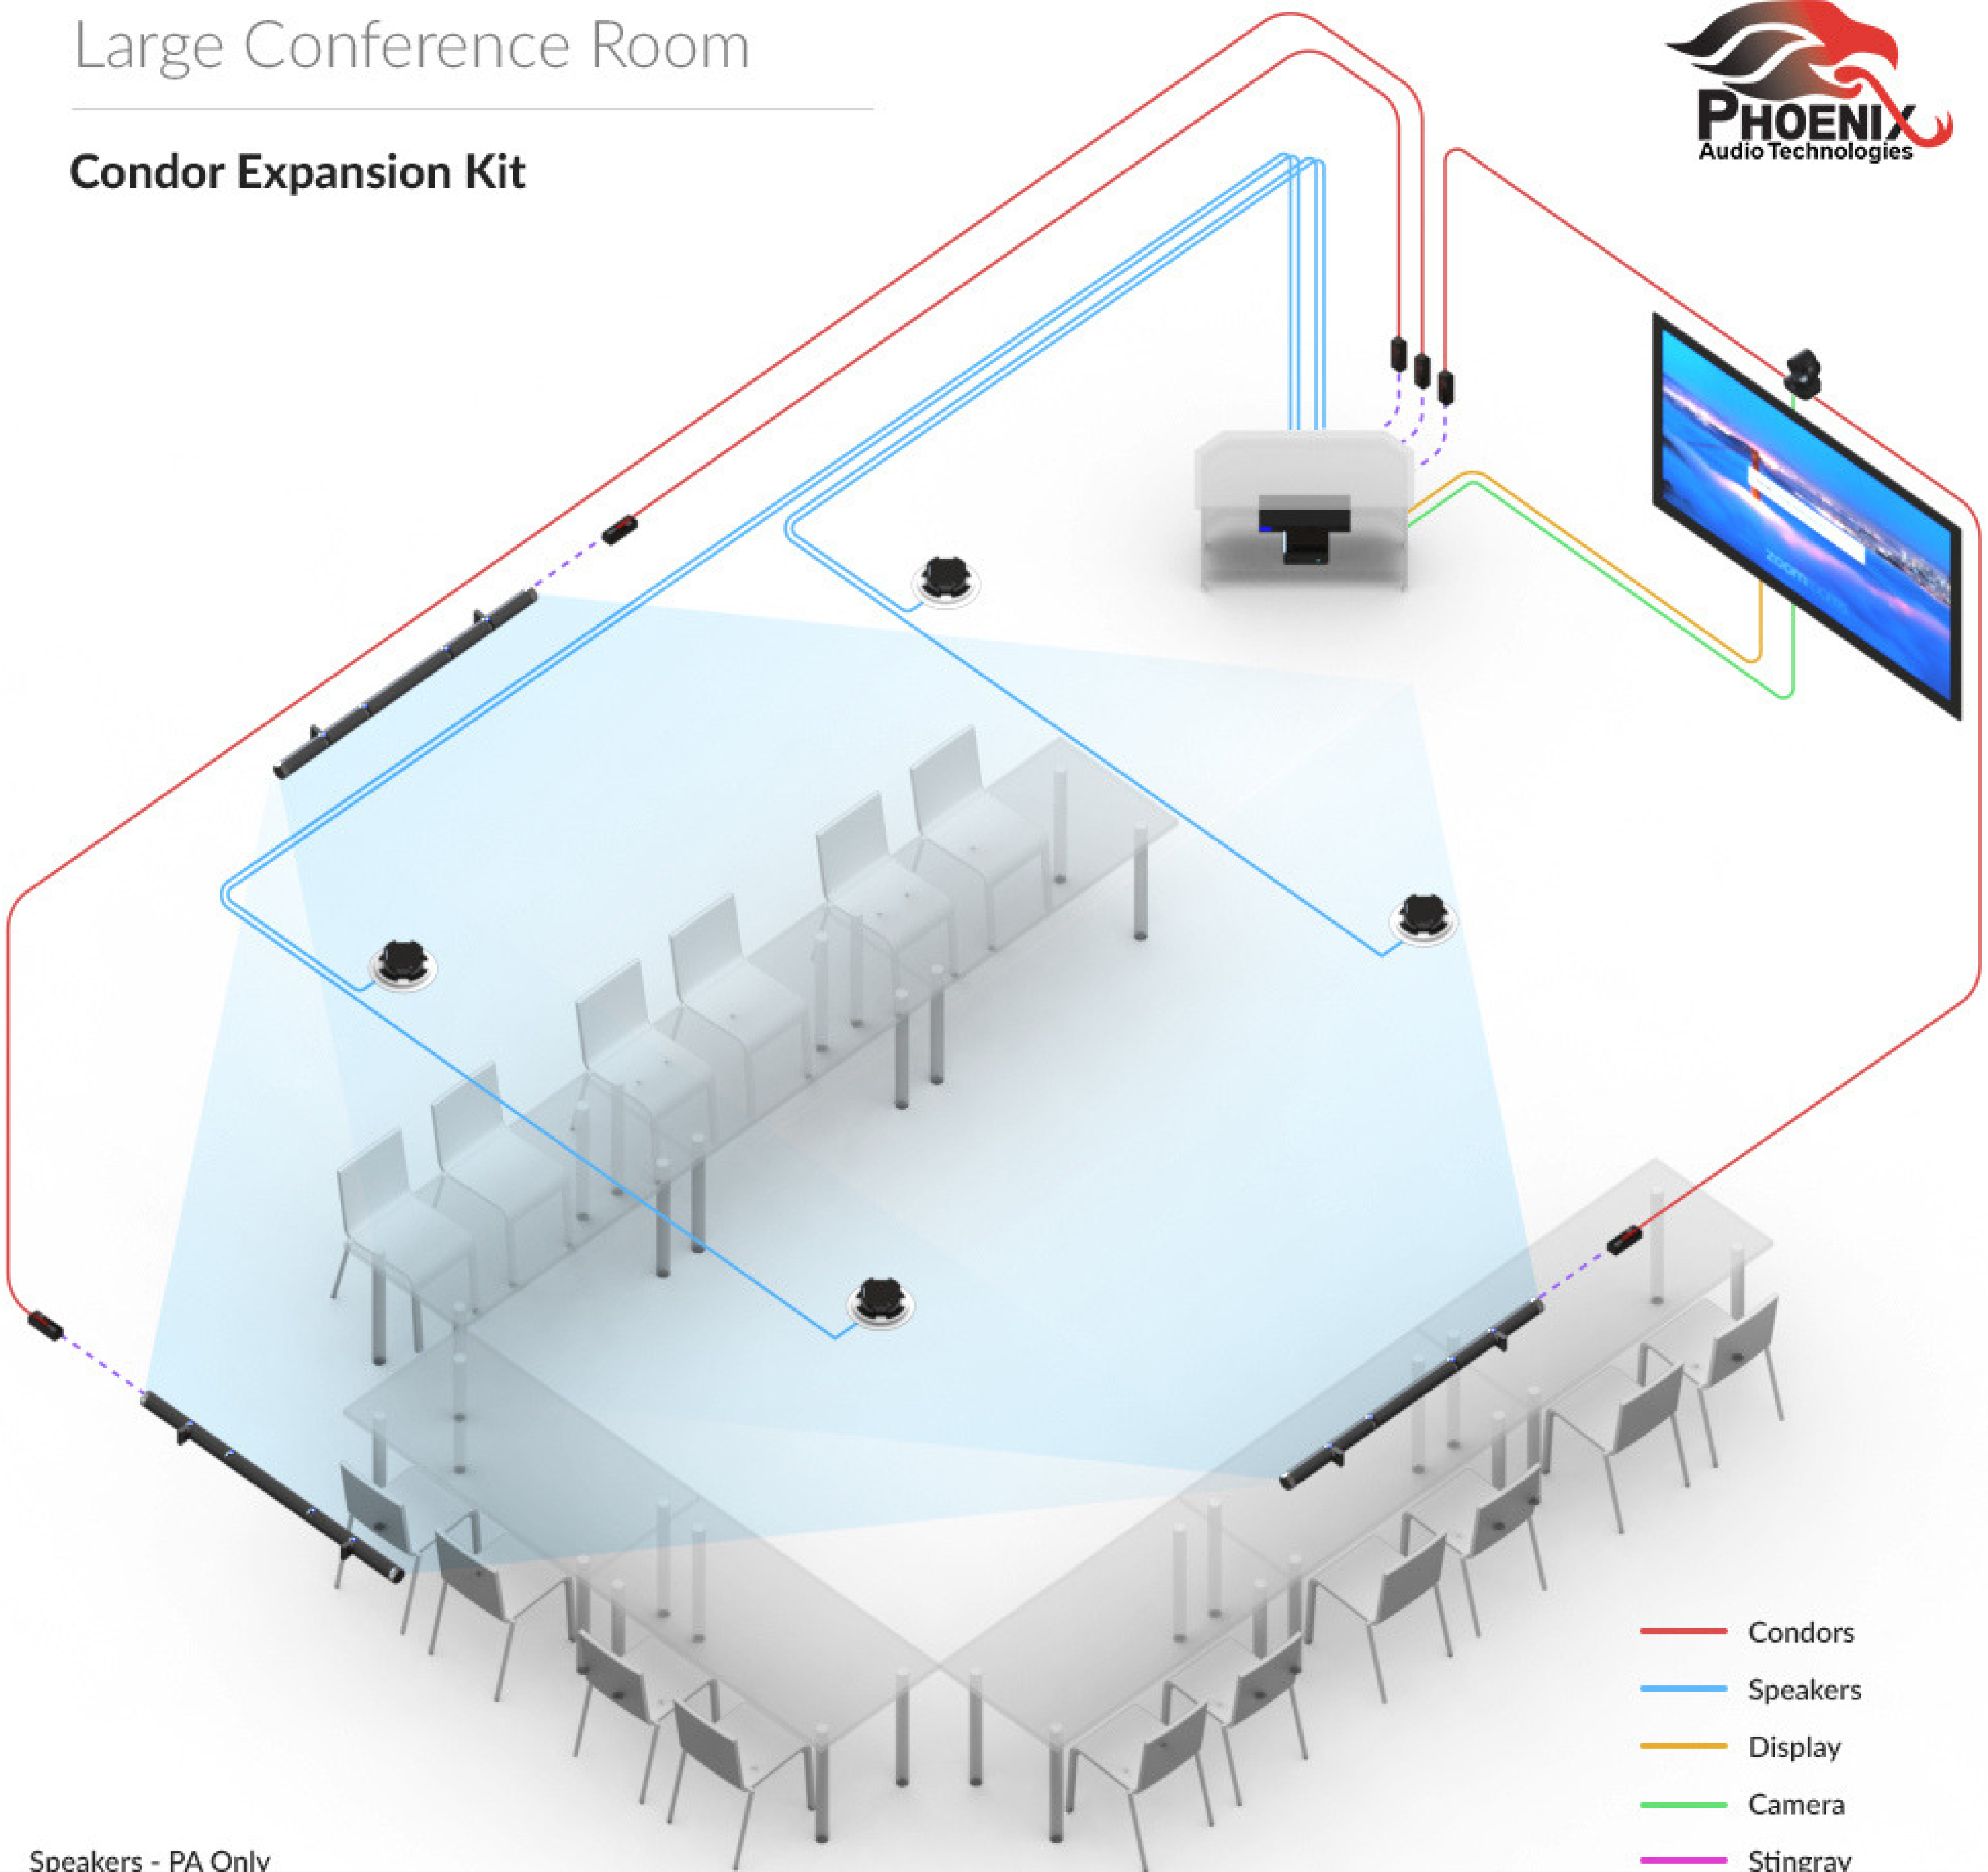

A Large Conference Room seats 11-20 people, typically with a long or wide table in the center of the room and a monitor on one or both ends. These can also be known as boardrooms and have many uses, such as company-wide or department meetings. With more space and people in the room, we recommend using the Stingray DSP Mixer. It can even be paired with one or more Condors!

In the following rendering, we created a room that seats 16 people in a U-shape table configuration and utilizes the **Condor Expansion Kit**. The room requires three Condor microphone arrays mounted to the walls, and four ceiling mounted speakers.

Large Conference Room

Condor Expansion Kit

- Condors
- Speakers
- Display
- Camera
- Stingray
- Audio Extenders

Speakers - PA Only

Audio Extender - Custom Cables
